

Installation Instructions

Internal Shade System

1. Attach **Line Tighteners** and **Line Grabbers** to each end of structure.
2. Insert **Suspension Line** into Line Grabber and then run line to the **Line Tightener** at opposite side.
3. Tighten **Suspension Line** until there is no sag in the entire length. You can always increase tightness after installation of system.
4. Determine exact size of **Curtain** required and cut to size if required. It is okay if the fabric hangs down at each side.
5. Determine location of **Curtain Hooks**. They should correspond to the placement of the **Suspension Line**.
6. Insert **Curtain Hooks** into the **Curtain** spacing them approximately 12" apart. Near one end you should place two **Curtain Hooks** for installation of the **Leading Edge Tube** (if used).
7. Hang **Curtain** from **Suspension Line**.
8. Fabricate **Leading Edge Tube** using the **Universal Swivels** and 1/2" PVC Pipe (not included with kit).
9. Attach **Leading Edge Tube** to **Curtain** using **Leading Edge Clips**.
