

Installation Instructions for EasyGrow Exhaust Fan Kit:

Parts List

(2) Horizontal support bar with pre-mounted bracket
(8) 10 x 1.5" stainless steel machine screws with nuts
(12) lock washers.

Step 1: using a drill with a 13/64 bit, drill out the (2) rivets on the top and bottom of fan

Step 2: Using (4) machine screws with nuts and (8) washers (outside and inside), mount horizontal support bars to top & bottom of fan

Step 3: Center completed fan assembly on back gable end of greenhouse (either side is fine). Using a sharpie, mark each corner of the outside shutter on the polycarbonate panel to form a square slightly larger than the shutter dimensions.

Step 4: Use razor knife and straight edge to carefully cut polycarbonate panel to create a square slightly larger than the outside shutter. Finished result should look as pictured to the right. Insert shutter fan through cutout.

Step 5: Center fan assembly and mark holes for mounting brackets on vertical uprights of the greenhouse frame (two on each upright). Remove fan and drill as marked using a 13/64 bit.

Step 6: Mount fan assembly to greenhouse frame using (4) machine screws with nuts and washers. Outside can be caulked around fan if desired; otherwise, you are done!
